2006

THE LAUNCH

Sylvar is launched under the ownership of Forest Protection Limited and BioAtlantech. Their first product is a baculovirus for the control of the Balsam Fir Sawfly.

THE EXPANSION

Sylvar begins field tests for Gypchek. Sylar is still supplying USDA/FS with Gypchek.

2011

THE DEVELOPMENT

Sylvar moves from pilot-scale to full-scale production by working with Andermatt Biocontrol.

2008

THE LURES

Sylvar launches a line of pheromone lures for monitoring/detection of important economic pests

2014

2016

THE FUTURE

Sylvar begins distributing external products, launches their first agricultural virus product and offers a biostimulant for the first time

10 CELEBRATING
YEARS

Sylvar

As Sylvar Technologies Inc celebrates its 10th anniversary, we would like to thank all of our employees, customers, and partners who have worked with Sylvar to make us the success that we are today. The focus of our dedicated team remains: to develop technologies that are environmentally safe and effective for managing pests and promoting plant growth in agriculture, forests and urban-forest settings.

As we look towards a bright future, we will continue working closely with our clients to further strengthen our customer relationships. We aim to inspire our customers with our services. Our goal is to be a reliable partner that is considered to be a genuine problem solver.

Going forward, we will continue to invest in our employees and foster an engaged culture which encouraging individual responsibility and initiative.

By constant innovation through strong collaboration and investment in research and development, we are ensuring a healthy Sylvar for decades to come.
