

Internship Opportunity

Process Development Internship

Chemistry - Engineering - Biology - Business
Chinova Bioworks - Fredericton, Canada

Start date: **Dec 2017**

Job Status: **6months - Paid \$20,000**

Number of openings: **1**

Application closing date: **Nov 20, 2017**

The Position

Join Chinova Bioworks as a paid intern to work alongside Chinova's scientists in the area of process development, relating to: microbiology, organic and analytical chemistry, market research, business development, process engineering and more! This project involves working on the development and application of Chinova's product on real commercial applications.

We're looking for a professional person with an innovative spirit. Attention to detail and competency in lab work is a must!

Requirements

- Completed a university bachelors degree or higher.
- Be between 15-30 years of age, inclusive.
- Has at least 3 months of lab experience in projects relating to chemistry or microbiology.
- Ability to work independently and in a group.
- Canadian citizen or permanent resident of Canada.

We can offer

- Real life commercial product development experience.
- Opportunity to conduct cutting edge and innovative research.
- Weekly meetings, an insight to company management and success strategies.
- Competitive starting salary.
- An energetic and positive working environment.
- Possibility of extending the position after the 6month period.

About Chinova Bioworks

Chinova Bioworks is in the business of making foods, beverages and cosmetics safer and healthier. With a new natural preservative ingredient composed of the mushroom biopolymer chitosan we are developing effective treatments for food, beverage and cosmetic products that make the products we use and consume every day natural, safe and healthy.
